## ABSTRACT

An adhesive resin cement composition having excellent adhesion and physical properties without the application of a priming material or an adhesive when it is bonded to the enamel and aesthetic properties.

5

10

A photocurable dental enamel adhesive composition comprising (A) a radically polymerizable monomer having an acid group and a structure represented by the following formula (1):

CH<sub>2</sub>=CR<sup>1</sup>-COO-R<sup>2</sup>-OCO-R<sup>3</sup>-COOH (1)

(R<sup>1</sup> is H or CH<sub>3</sub>, and R<sup>2</sup> and R<sup>3</sup> are each independently a divalent inert group essentially composed of C and H), (B) a monofunctional radically polymerizable monomer having a molecular weight of 220 or less and a boiling point of 60°C/10 mmHg or more, (C) a carboxylic ester group-containing aromatic amine, (D) a photopolymerization initiator and (E) a bifunctional radically polymerizable monomer and optionally (F) a filler.
